(54) Title: A METHOD AND SYSTEM FOR FACILITATING DELIVERY AND PICKUP OF GOODS

(57) Abstract: The present system facilitates delivery and pickup of goods by providing a locker module at a location near a customer's residential site. For a vendor to deliver a good to the customer, the vendor leases a unit in the locker module from the system controller by accessing the system controller's website and providing details of the customer and a delivery agent. The vendor then notifies the delivery agent to make the delivery. The delivery agent provides the system controller the particulars of its delivery person. The designated delivery person accesses the leased locker unit using a registered smart card and delivers the good. The system controller notifies the customer of the delivered good. The customer accesses the locker unit containing the good by using a registered smart card.
